ZAKARI CS

Rapeseed

Varietal profile

Type: line

Earliness: medium-early maturing

Registration: EU 2016

Height: short

TKW: good

Agronomic and health profile

Early vigour: good to very good

Autumn development: good

Elongation sensitivity: low

Lodging sensitivity: VLS

Phoma sensitivity: VLS

Cylindrosporium and dry rot resistance: LS

The essential

Reliable yields due to very good flowering

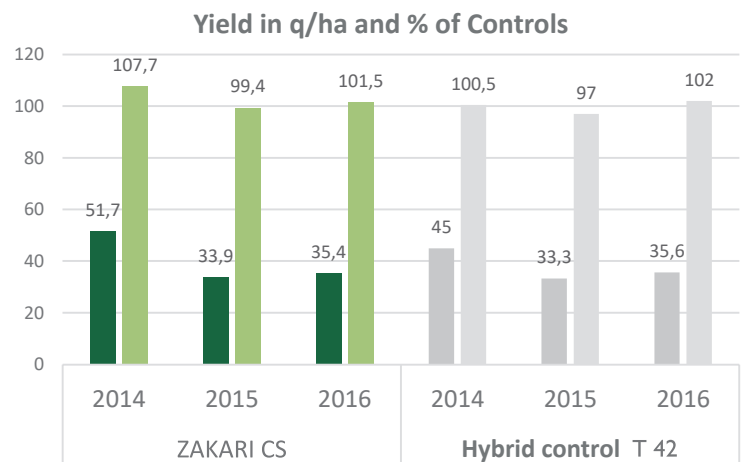

- Medium-early variety with long flowering: 30 to 35 days
- High silique potential

Healthy and balanced variety

- VLS to phoma
- Very good branched broomrape behaviour
- Medium plant size, very low lodging sensitivity

High yield potential

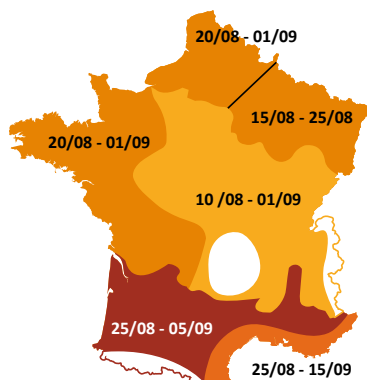

- Good TKW
- Good oil content
- Performance very close to that of hybrids
- Good multi-year yield results:

Recommendations

Cultivation areas

- Recommended sowing dates:

Cultivation tips

- Sowing early ensures crop implantation and results in increased yields
- Option to sow under frost-sensitive cover
- Harvest at the right stage of maturity

Density tips

- Deep soils: 40 seeds/m²
- Average soils: 45 seeds/m²
- Shallow soils: 50 seeds/m²
